PROGRAM 1

Develop and demonstrate the usage of Inline, Internal and External Stylesheet using CSS

(Online Recipe Booking Website)

AIM

To design an Online Recipe Booking Web Page and demonstrate the usage of:

- **Inline CSS**
- **Internal CSS**
- **External CSS**

SOFTWARE REQUIRED

- **OS: Windows / Linux**
- **Editor: VS Code / Notepad++**
- **Browser: Chrome / Firefox**

THEORY

CSS (Cascading Style Sheets) is used to control the presentation of HTML elements such as:

- **Colors**
- **Fonts**
- **Layout**
- **Spacing**

Types of CSS:

- **Inline CSS – Applied directly inside an HTML tag**
 - **Internal CSS – Written inside <style> tag within <head> section**
 - **External CSS – Written in a separate .css file and linked using <link>**
-

STEPS / PROCEDURE

Inline CSS

- 1. Create a file named inline.html.**
 - 2. Write basic HTML structure.**
 - 3. Apply CSS using style="" attribute inside tags.**
 - 4. Save and execute in browser.**
-

PROGRAM CODE

◆ Inline CSS Example

File: inline.html

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
<title>Inline CSS - Recipe Booking</title>
```

```
</head>
```

```
<body>
```

```
<h1 style="color: darkred; text-align: center;">
```

Online Recipe Booking

```
</h1>
```

```
<p style="font-size:18px; color: green;">
```

Book your favorite homemade recipes easily!

```
</p>
```

```
<button style="background: orange; padding: 10px; border: none;">
```

Book Now

```
</button>
```

```
</body>
```

```
</html>
```

Internal CSS Example

File: internal.html

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
<title>Internal CSS - Recipe Booking</title>
```

```
<style>
body {
font-family: Arial;
background-color: #fff3e6;
}
```

```
h1 {
color: darkred;
text-align: center;
}
```

```
p {
font-size: 18px;
color: navy;
margin: 20px;
}
```

```
button {
background-color: green;
color: white;
padding: 10px 15px;
border: none;
border-radius: 5px;
}
```

```
</style>
```

```
</head>
```

```
<body>
```

```
<h1>Online Recipe Booking</h1>
```

```
<p>Reserve your favorite dishes from expert home chefs.</p>
```

```
<button>Reserve Now</button>
```

```
</body>
```

```
</html>
```

External CSS Example

File 1: external.html

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
<title>External CSS - Recipe Booking</title>
```

```
<link rel="stylesheet" href="style.css">
```

```
</head>
```

```
<body>
```

```
<h1>Online Recipe Booking</h1>
```

```
<p>Order delicious recipes prepared with love.</p>
```

```
<button>Login to Book</button>
```

```
</body>
```

```
</html>
```

File 2: style.css

```
body {
```

```
font-family: Verdana;
```

```
background-color: #ffe6e6;
```

```
}
```

```
h1 {
```

```
color: purple;
```

```
text-align: center;
```

```
margin-top: 30px;
```

```
}
```

```
p {
```

```
font-size: 18px;
```

```
color: #333;
```

```
margin: 20px;
```

```
}
```

```
button {
```

```
background-color: #ff0066;
```

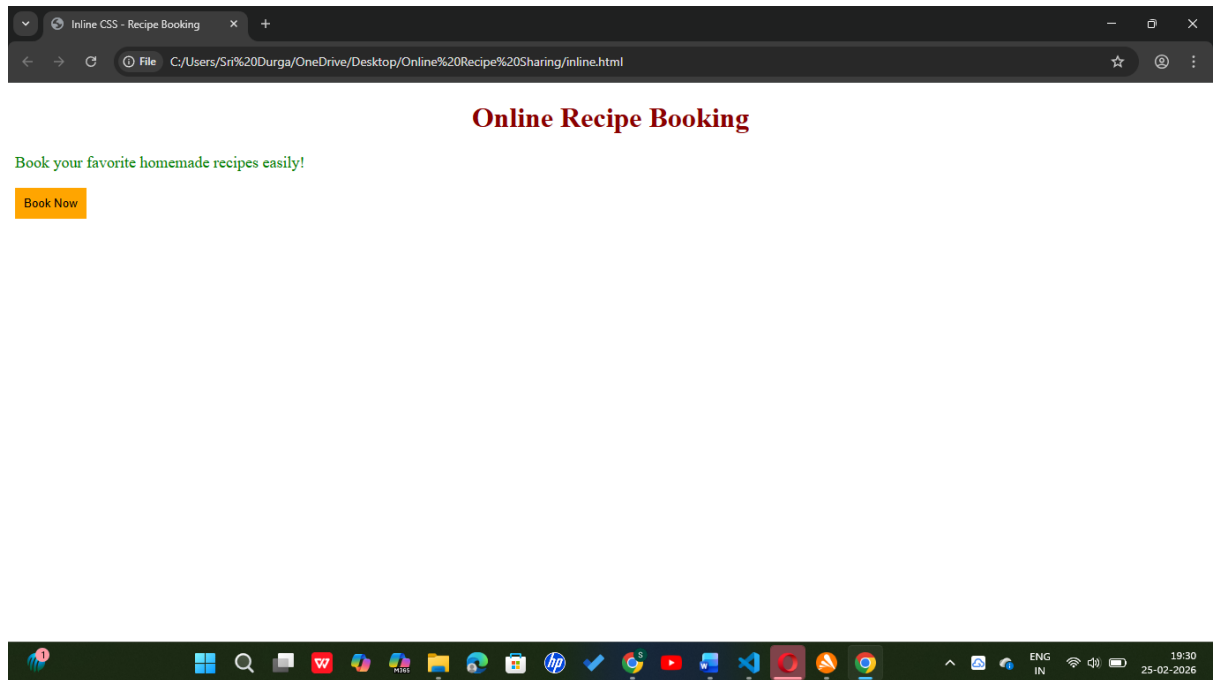

```
color: white;
```

```
padding: 10px 20px;
```

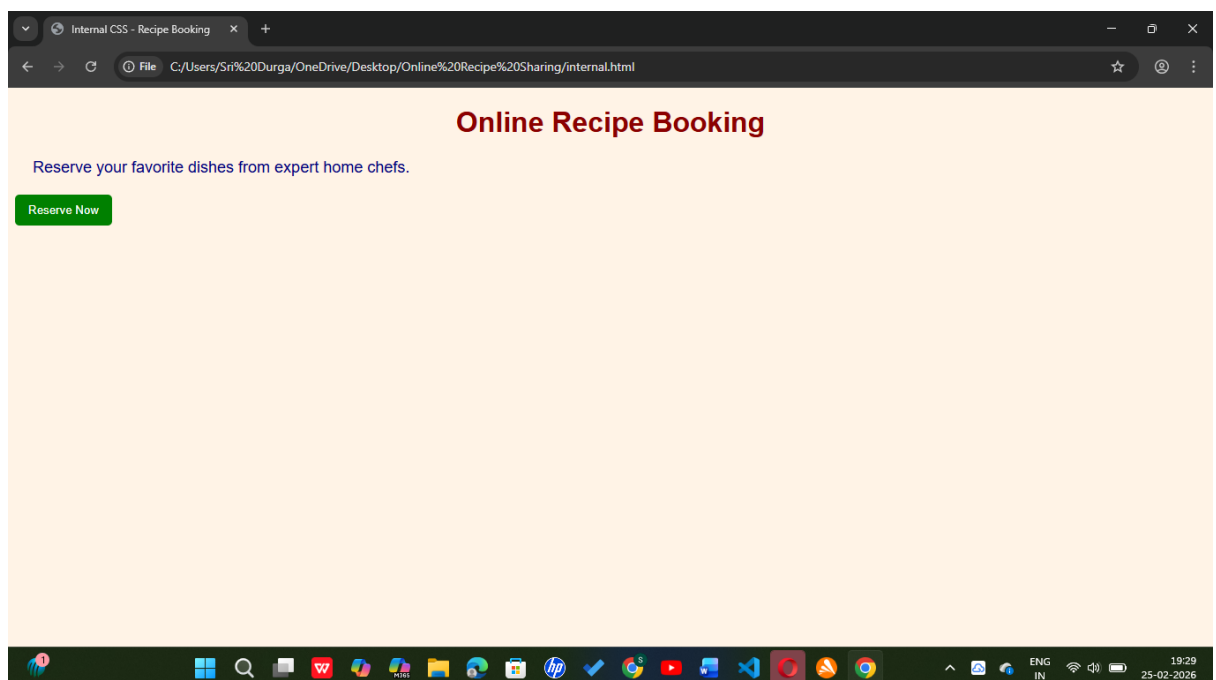

```
border: none;  
border-radius: 6px;  
}
```

OUTPUT

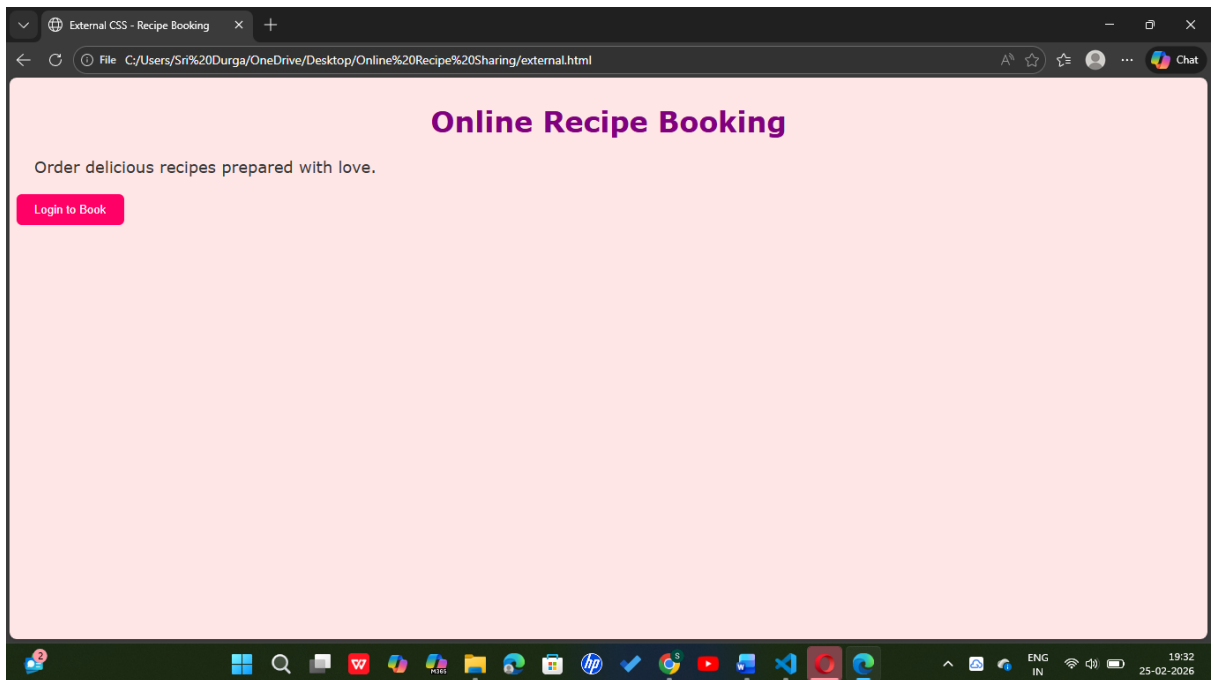

- **Inline styles applied directly in HTML tags**

- **Internal CSS applied using <style>**

- **External CSS applied through separate .css file**

RESULT

Thus, Inline, Internal and External stylesheets were implemented and demonstrated successfully for an Online Recipe Booking Website.

PROGRAM 2

Design a Recipe Booking Web Page Using CSS Keyframe Animation

AIM

To design an Online Recipe Booking webpage and apply CSS keyframe animation for text and card effects.

THEORY

CSS Keyframe Animation is used to create animations by defining style changes at different stages.

Syntax:

```
@keyframes animationName {  
0% { }  
100% { }  
}
```

STEPS / PROCEDURE

1. Create a file named `recipe_booking_animation.html`.
 2. Design a booking card layout using `<div>`.
 3. Create a table to show booking details.
 4. Apply CSS styles for layout and design.
 5. Define keyframe animations:
 - `slideDown` (card animation)
 - `glowText` (title animation)
 6. Execute in browser.
-

PROGRAM CODE

File: `recipe_booking_animation.html`

```
<!DOCTYPE html>  
  
<html>  
  
<head>  
  
<title>Recipe Booking - Animation</title>  
  
<style>  
  
body {  
font-family: Arial, sans-serif;
```

```
background: #f2f2f2;
display: flex;
justify-content: center;
align-items: center;
height: 100vh;
}
```

```
.card {
width: 450px;
padding: 25px;
background: white;
border-radius: 12px;
box-shadow: 0px 0px 15px rgba(0,0,0,0.2);
animation: slideIn 2s ease;
}
```

```
h2 {
text-align: center;
color: darkred;
animation: glowText 2s infinite alternate;
}
```

```
table {
width: 100%;
margin-top: 15px;
```

```
border-collapse: collapse;  
}
```

```
td {  
padding: 10px;  
border: 1px solid #ccc;  
}
```

```
.label {  
font-weight: bold;  
background: #ffe0e0;  
width: 40%;  
}
```

```
/* Animations */
```

```
@keyframes slideIn {  
from {  
transform: translateY(-60px);  
opacity: 0;  
}  
to {  
transform: translateY(0);  
opacity: 1;  
}
```

```
}
```

```
@keyframes glowText {
```

```
  from {
```

```
    color: darkred;
```

```
    text-shadow: 0 0 5px pink;
```

```
  }
```

```
  to {
```

```
    color: orange;
```

```
    text-shadow: 0 0 10px red;
```

```
  }
```

```
}
```

```
</style>
```

```
</head>
```

```
<body>
```

```
<div class="card">
```

```
<h2>Recipe Booking Details</h2>
```

```
<table>
```

```
<tr>
```

```
<td class="label">Customer Name</td>
```

<td>Durga</td>

</tr>

<tr>

<td class="label">Recipe Booked</td>

<td>Masala Dosa</td>

</tr>

<tr>

<td class="label">Booking Date</td>

<td>12/02/2026</td>

</tr>

<tr>

<td class="label">Quantity</td>

<td>2 Plates</td>

</tr>

<tr>

<td class="label">Contact</td>

<td>9876543210</td>

</tr>

</table>

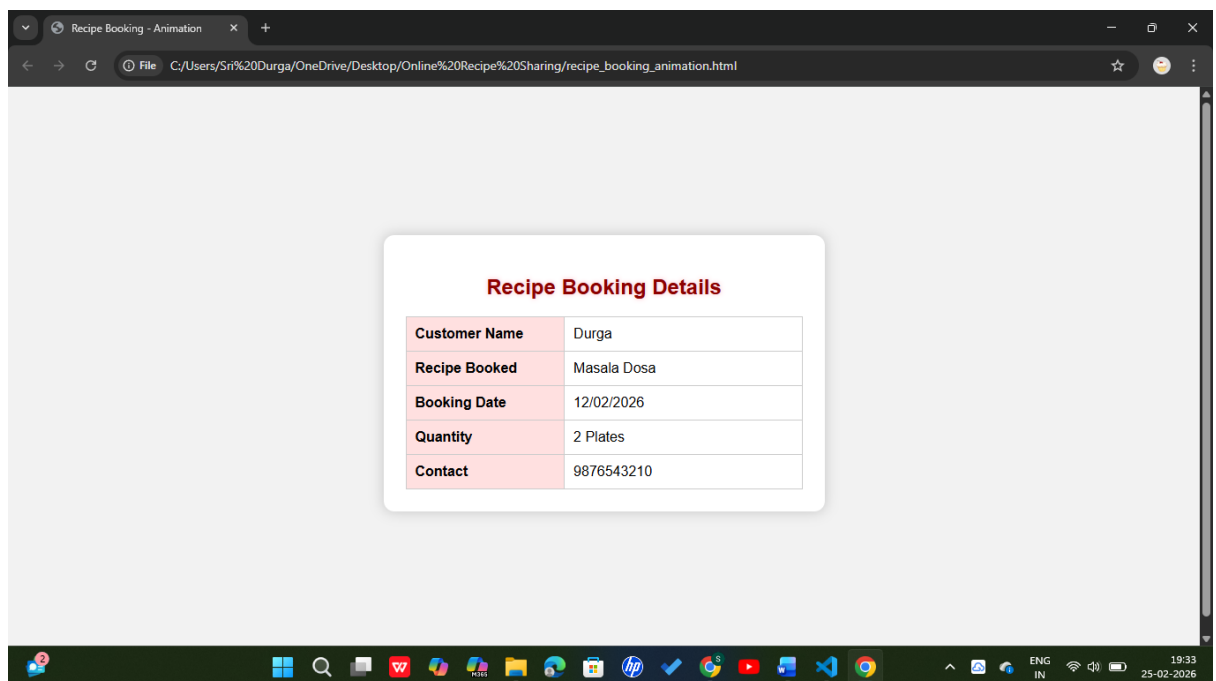

`</div>`

`</body>`

`</html>`

OUTPUT

- Booking card slides smoothly from top
- Title glows continuously
- Booking details displayed in animated card

RESULT

Thus, an Online Recipe Booking Web Page was designed and CSS keyframe animation was implemented successfully.
